

# European Parliament

The European Parliament in Brussels and Strasbourg presents the ultimate challenge in conference and simultaneous interpretation. It not only requires complex coupling of multiple conference rooms with full control from a central control room, but also simultaneous interpretation in no less than 23 languages. This number is regularly increasing as new member countries join the European Union.

## Brussels Strasbourg

The **TCS5500** Conference system is ideal to cope with such extreme requirements. It can handle simultaneous interpretation **up to 58 languages** and offers unique **active room coupling** features.

### Quick Facts

In Brussels and Strasbourg  
**Televic** installed:

- 22 Conference rooms
- 5068 Delegate stations
- 1283 Interpreter desks
- Multi-site room coupling
- Centralised control

### Active room coupling.

The extensive room coupling functionality of the TCS5500 allows the creation of virtual conference rooms through allocation of delegate microphones and interpreter desks in conference rooms on multiple locations.

### Scalability

The TCS5500 is ideal as a scalable platform to cope with the variety in room sizes. At the European Parliament rooms range from 40 to 912 delegates and 12 to 108 interpreter desks.

### Full Central Control

Using Televic's extensive software control, all conference rooms can be controlled from one central control room.
